

TECHNICAL SERVICES

Technical Services acquires, catalogues, and processes all print and non-print materials, including electronic resources for library use, in the most cost-effective manner. Technical Services also acquires non-print materials, excluding computer software, for the University classroom/lab/shop use.

Technical Services maintains the Library's records in the Kwantlen Polytechnic University Coast Capital Library catalogue known as Unicorn. Unicorn is an integrated library system which houses control records for the catalogued materials in our collection and allows them to be used in separate modules according to their operational functionalities. As the centralized cataloguing unit in the Library, Technical Services has the responsibility to maintain the control records for acquisitions, cataloguing, and serials modules.
